Acora Acoustics

SRB

2-Way Bookshelf Monitor

When you first listen to the Acora Acoustics SRB loudspeaker, we humbly suggest you keep your eyes closed. The SRB delivers such a wide tall, and engaging soundstage, you may not believe the sound is coming from the diminutive SRS. You will hear nuance and depth to the music. We believe you will hear many things you simply hadn't before. What you won't hear is the enclosure. Acora Acoustics loudspeakers are constructed using hand crafted specially treated granite enclosures. The rigidity of granite far exceeds that of traditional particle board or wood enclosures. One of the benefits of this is as the SRB's drivers move to push air / create sound, the enclosure isn't absorbing this energy and dulling or smearing the sound. Another benefit of the Acora enclosure is it does not need internal bracing to "stiffen" the enclosure. This means that internal cross bracing is not required. This means no additional reflections inside the enclosure that will vibrate the low frequency driver. The SRB also utilizes world class drivers and a hand built crossover network however the real secret to the **Acora Sound**, is that you only hear these, not the enclosure.

Specifications

Design = 2-Way Bass Reflex

Low Frequency Driver = 5.5" Sandwich Paper Cone

High Frequency Driver = 1" Beryllium Dome Tweeter

Impedance = 8 ohm

Recommended Power = 10w - 150w

Sensitivity = 86.5 1w/1m

Frequency Range = 43Hz - 35KHz

Enclosure = High Polish Black Granite 2cm

Dimensions = 9" x 11" x 13"

Weight = 58lbs each

(All specifications subject to change without notice)
