INTRODUCING

AMBITIOUS 2

AMBITIOUS 2

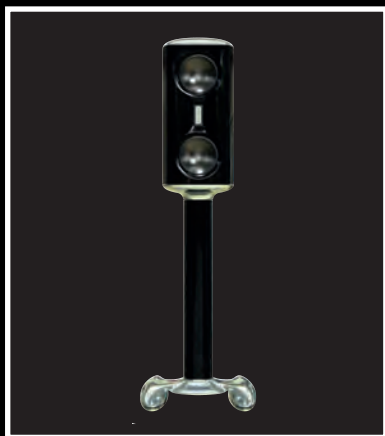

After years of research and development we are proud to introduce our new loudspeaker AMBITIOUS 2

- transforming 400 kilos of aluminum...

To avoid distortion and coloration we designed an enclosure that makes AMBITIOUS 2 extremely rigid.

Mixing anodized aluminum with stainless steel, brass and carbon fibre we made an advanced construction - setting new standards. And the perfect foundation for high-end performance.

AMBITIOUS 2 weighs approximately 70 kilos. To manufacture each speaker we use 200 kilos of premium aluminum processed with cutting-edge technologies.

Using aluminum, brass and stainless steel we made the ambitious enclosure without parallel sides.

Ambitious 2 weighs approximately 70 kilos (each)

10 kilos massive foot made from 50 kilos of aluminum. Mounting spikes is possible.

AMBITIOUS Ribbon tweeter

2 x Diamond woofer

Binding posts

AMBITIOUS

AUDIO DESIGN

Our interest in high performance audio makes research and development most important to Ambitious Audio Design.

For the past 6 years, a team of specialists has been working with the development of AMBITIOUS 2.

Reaching for higher performance, every part of the speaker has been under examination for improvements.

More improvements have been developed and they will be introduced - for the first time - in AMBITIOUS 2.

AMBITIOUS 2 will be ready for production 2016.

Ambitious Audio Design is founded by Poul H. Hansen.
