

SA-2.3

The SA-2 loudspeaker were conceived as a full range three way system capable of reproducing great dynamics reach in details and stunning stereo image.

The research and development of the SA2.3 was assisted by modern systems and sophisticated instruments. More than one year was invested in this project to assure a mature product that will comply with the most demanding listeners.

The SA-2.3 first order crossover is the responsible of the result, carefully tailored compensation of amplitude and phase gives the system unparallel capabilities for reproducing an extremely open and detailed stereo imaging with a flat wide frequency response.

The SA-2.3 with its three 5" low mass polypropylene driver and a textile dome tweeter can reproduce very low frequencies with a exceptional transient control and sweet detailed sound. The Cabinet of the SA-2 is narrow with rounded edges to avoid unwanted diffractions distortion. This effort is rounded of with a mahogany veneer finished in polyester.

Frequency response:

40 Hz-20 kHz

Recommended power (max):

30 a 150 Watts

Sensitivity:

87 dB/W/m

Impedance:

8 Ohms

Weight:

15 kg each

Dimentions (height, width, depth):

81cm x 20cm x 37cm
