The System Audio philosophy...

System Audio was founded in 1984 by the young danish HiFi enthusiast, Ole Witthoft. Because Ole could not find speakers that would reproduce the dynamics of live music, he decided to build his own.

The rest is history.

Ole believed that music should give one a feeling of "being there"; that one should get an insight and understanding of the musical event. Musicians spend many years perfecting their art. In this respect, System Audio has spent many years perfecting their speakers abilities in order to reproduce every nuance and aspect of the music without adding or deleting anything from it.

System Audio 2050

The 2050 is an impressive loudspeaker. It has a dynamic range of 115 dB. It's musical, accurate and involving. It's cabinetry and design reflect the classic danish design and craftsmanship. Many hours of work go into building each pair. All components are tested up to 14 times before each craftman signs the quality assurance document.

The 2050 works as a D'Appolito configuration where the two bass drivers operate in parallel. This design principle results in minimized reflections from the floor and ceiling of the listening room. The effect is a wide and open soundstage.

The 2050 is the first speaker to have a three chamber bass reflex loading design where all chambers are individually damped, tuning the bass response so there is virtually no coloration of the sound. The bottom of the cabinet is a sealed chamber which can be filled with sand to improve speaker performance even further.

Internally wired with Nordost Flatline Cable

Each loudspeaker in the 2000 series is wired with high performance 2FLAT cable from Nordost Flatline.

2FLAT is a unique extruded teflon cable which transmit signals at 95% the speed of light. It has a very low capacitance and inductance so nothing is taken away from the music.

The 2000 series, powerful, accurate and dynamic speakers

Powerful mini monitor

System Audio 2010

The 2010 is a powerful mini monitor loudspeaker designed to reproduce all types of music with exceptional precision and dynamics. It is designed as a high end product with a very open and musical performance. Combined with quality components the 2010 will provide many years of listening pleasure.

The 2010 is magnetically shielded so it can be used in close proximity to a television or monitor as part of a Home Theater System. It can also be used as a dedicated center channel speaker when placed under or on top of a television.

Over 1 million danish kroner have been invested in developing the drive units for the 2000 series

The first loudspeaker drivers in the world were invented in Denmark and our long tradition and state of the art research facilities in Denmark have been utilized to produce the impressive results you can hear in the new drivers developed for the 2000 series.

BIG 18 - our fast bass driver

BIG 18 in conjunction with careful cabinet design gives the 2000 series it's dynamic and powerful bass. It's a 6.5" (17 cm) driver with a unique light weight 10 sided membrane. The weight of the moving mass is half that of a normal 6.5" driver. This results in an extremely fast, dynamic and detailed bass and midrange performance.

Features :

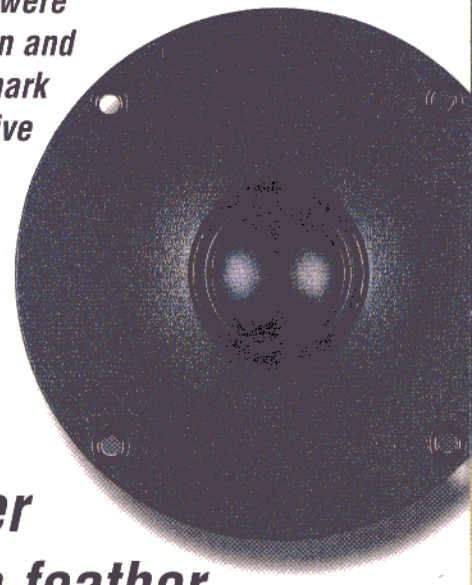

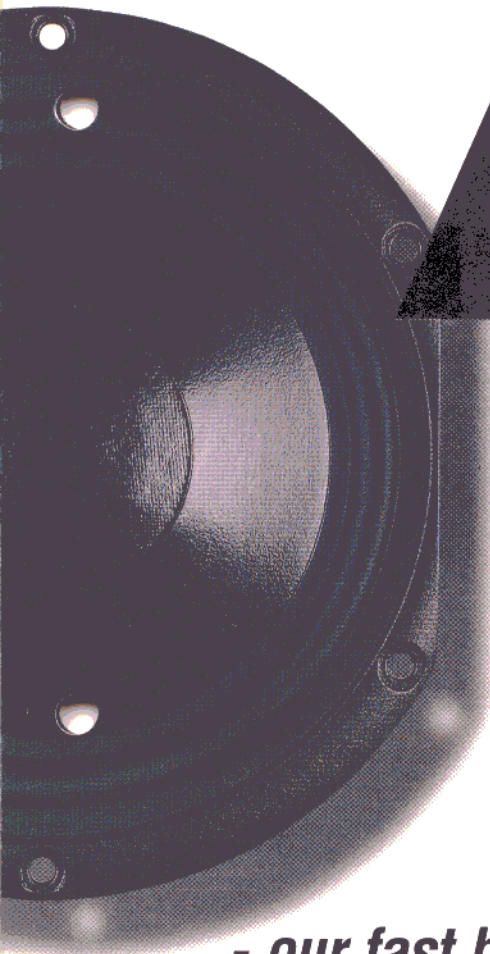

- 10 sided light weight coated paper membrane
- High linearity low loss suspension
- Non resonant cast polymer chassis
- Magnetically shielded
- Powerful double magnet design
- Inverted center dome

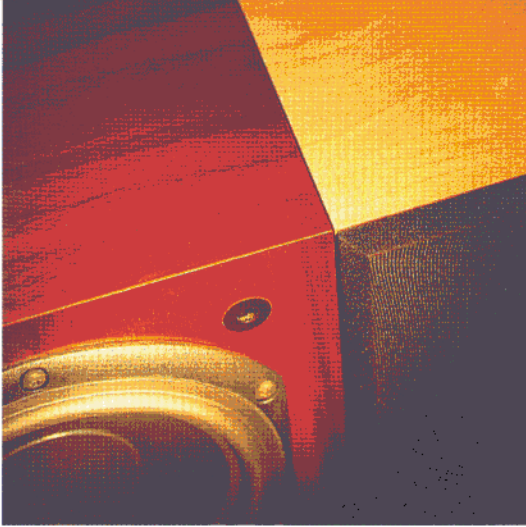

The tweeter - light as a feather

The high frequencies are reproduced by our advanced tweeter design. The membrane of this driver is actually lighter than a feather. You can hear this as the music flows freely without compression. The sound is extremely focused and dynamic. Special placement of the tweeter on the 2010 and the 2050 give the speaker a perfect soundstage and phase response.

Features :

- Light weight coated fabric membrane
- Magnetically shielded
- Linear response faceplate
- Large cavity below suspension
- High stability ferrofluid
- Damped cavity in pole piece

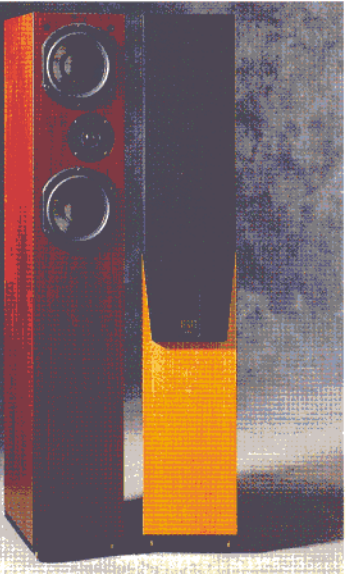

Danish handcrafted wood veneer cabinets

Many hours of work have gone into careful matching of the cabinets. Each pair of wood grain surfaces are carefully matched until they are almost identical. Throughout the production process, the cabinets go together in pairs. Each pair representing a unique piece of artwork from Denmark, home of the world's finest cabinet builders.

Technical specifications:

System Audio 2050

Power Handling : 200 Watts
Impedance : 4 Ohms
Frequency Response (+/- 4 dB) : 25-30.000 Hz
Sensitivity (1W, 1m) : 91 dB
Speaker Principle : 2-way D'Appolito/3-chamber bass reflex
Crossover Frequency : 2200 Hz
Dimensions (WxHxD) cm : 20 x 111,9 x 30
Biwiring : Yes
Finish : Cherry or Rosewood (real wood veneer)
Sand Chamber : Yes
Bass/mid Drivers : 2 x 6.5" (17 cm)
Tweeter : 1" (2.5 cm)
Recommended Amplifier Power : Min. 75 Watts

System Audio 2010

Power Handling : 120 Watts
Impedance : 8 Ohms
Frequency Response (+/- 4 dB) : 40-30.000 Hz
Sensitivity (1W, 1m) : 89 dB
Speaker Principle : 2-way/bass reflex
Crossover Frequency : 3000 Hz
Dimensions (WxHxD) cm : 20 x 38.9 x 30
Finish : Cherry or Rosewood (real wood veneer)
Biwiring : Yes
Bass/mid Driver : 1 x 6.5" (17 cm)
Tweeter : 1" (2.5 cm)
Recommended Amplifier Power : Min 50 Watts

Other System Audio products : The 1000 series and the 5000 series
